Moral Scepticism

There are no objective values. […]

The claim that values are not objective, are not part of the fabric of the world, is meant to include not only moral goodness, which might be most naturally equated with moral value, but also other things that could be more loosely called moral values or disvalues—rightness and wrongness, duty, obligation, an action’s being rotten and contemptible, and so on. It also includes non-moral values, notably aesthetic ones, beauty and various kinds of artistic merit. […]

Since it is with moral values that I am primarily concerned, the view I am adopting may be called moral scepticism. But this name is likely to be misunderstood: “moral scepticism” might also be used as a name for either of two first order views, or perhaps for an incoherent mixture of the two. A moral sceptic might be the sort of person who says “All this talk of morality is tripe,” who rejects morality and will take no notice of it. Such a person may be literally rejecting all moral judgements; he is more likely to be making moral judgements of his own, expressing a positive moral condemnation of all that conventionally passes for morality; or he may be confusing these two logically incompatible views, and saying that he rejects all morality, while he is in fact rejecting only a particular morality that is current in the society in which he has grown up. But I am not at present concerned with the merits or faults of such a position. These are first order moral views, positive or negative: the person who adopts either of them is taking a certain practical, normative, stand. By contrast, what I am discussing is a second order view, a view about the status of moral values and the nature of moral valuing, about where and how they fit into the world. These first and second order views are not merely distinct but completely independent: one
could be a second order moral sceptic without being a first order one, or again the other way round. A man could hold strong moral views, and indeed ones whose content was thoroughly conventional, while believing that they were simply attitudes and policies with regard to conduct that he and other people held. Conversely, a man could reject all established morality while believing it to be an objective truth that it was evil or corrupt. [...]  

**Hypothetical and Categorical Imperatives**

We may make this issue clearer by referring to Kant’s distinction between hypothetical and categorical imperatives, though what he called imperatives are more naturally expressed as “ought”-statements than in the imperative mood. “If you want $X$, do $Y$” (or “You ought to do $Y$”) will be a hypothetical imperative if it is based on the supposed fact that $Y$ is, in the circumstances, the only (or the best) available means to $X$, that is, on a causal relation between $Y$ and $X$. The reason for doing $Y$ lies in its causal connection with the desired end, $X$; the oughtness is contingent upon the desire. But “You ought to do $Y$” will be a categorical imperative if you ought to do $Y$ irrespective of any such desire for any end to which $Y$ would contribute, if the oughtness is not thus contingent upon any desire. . . .

A categorical imperative, then, would express a reason for acting which was unconditional in the sense of not being contingent upon any present desire of the agent to whose satisfaction the recommended action would contribute as a means—or more directly: “You ought to dance,” if the implied reason is just that you want to dance or like dancing, is still a hypothetical imperative. Now Kant himself held that moral judgements are categorical imperatives, or perhaps are all applications of one categorical imperative, and it can plausibly be maintained at least that many moral judgements contain a categorically imperative element. So far as ethics is concerned, my thesis that there are no objective values is specifically the denial that any such categorically imperative element is objectively valid. The objective values which I am denying would be action-directing absolutely, not contingently (in the way indicated) upon the agent’s desires and inclinations. [...]  

**The Claim to Objectivity**

[..] As I have said, the main tradition of European moral philosophy includes the… claim, that there are objective values of just the sort I have denied. [...] Kant in particular holds that the categorical imperative is not only categorical and imperative but objectively so: though a rational being gives the moral law to himself, the law that he thus makes is determinate and necessary. Aristotle begins the Nicomachean Ethics by saying that the good is that at which all things aim, and that ethics is part of a science which he calls “politics,” whose goal is not knowledge but practice; yet he does not doubt that there can be knowledge of what is the good for man, nor, once he has identified this as well-being or happiness, *eudaimonia*, that it can be known, rationally determined, in what happiness consists; and it is plain that he thinks that this happiness is intrinsically desirable, not good simply because it is desired. [...]  

I conclude, then, that ordinary moral judgements include a claim to objectivity, an assumption that there are objective values in just the sense in which I am concerned to deny this. And I do not think it is going too far to say that this assumption has been incorporated in the basic, conventional, meanings of moral terms. Any analysis of the meanings of
moral terms which omits this claim to objective, intrinsic, prescriptivity is to that extent incomplete...

If second order ethics were confined, then, to linguistic and conceptual analysis, it ought to conclude that moral values at least are objective: that they are so is part of what our ordinary moral statements mean: the traditional moral concepts of the ordinary man as well as of the main line of western philosophers are concepts of objective value. But it is precisely for this reason that linguistic and conceptual analysis is not enough. The claim to objectivity, however ingrained in our language and thought, is not self-validating. It can and should be questioned. But the denial of objective values will have to be put forward not as the result of an analytic approach, but as an “error theory,” a theory that although most people in making moral judgements implicitly claim, among other things, to be pointing to something objectively prescriptive, these claims are all false, it is this that makes the name “moral scepticism” appropriate.

But since this is an error theory, since it goes against assumptions ingrained in our thought and built into some of the ways in which language is used, since it conflicts with what is sometimes called common sense, it needs very solid support. It is not something we can accept lightly or casually and then quietly pass on. If we are to adopt this view, we must argue explicitly for it. Traditionally it has been supported by arguments of two main kinds, which I shall call the argument from relativity and the argument from queerness...

The Argument from Relativity

The argument from relativity has as its premiss the well-known variation in moral codes from one society to another and from one period to another, and also the differences in moral beliefs between different groups and classes within a complex community. Such variation is in itself merely a truth of descriptive morality, a fact of anthropology which entails neither first order nor second order ethical views. Yet it may indirectly support second order subjectivism: radical differences between first order moral judgements make it difficult to treat those judgements as apprehensions of objective truths. But it is not the mere occurrence of disagreements that tells against the objectivity of values. Disagreement on questions in history or biology or cosmology does not show that there are no objective issues in these fields for investigators to disagree about. But such scientific disagreement results from speculative inferences or explanatory hypotheses based on inadequate evidence, and it is hardly plausible to interpret moral disagreement in the same way. Disagreement about moral codes seems to reflect people’s adherence to and participation in different ways of life. The causal connection seems to be mainly that way round: it is that people approve of monogamy because they participate in a monogamous way of life rather than that they participate in a monogamous way of life because they approve of monogamy. Of course, the standards may be an idealization of the way of life from which they arise; the monogamy in which people participate may be less complete, less rigid, than that of which it leads them to approve. This is not to say that moral judgements are purely conventional. Of course there have been and are moral heretics and moral reformers, people who have turned against the established rules and practices of their own communities for moral reasons, and often for moral reasons that we would endorse. But this can usually be understood as the extension, in ways which, though new and unconventional, seemed to them to be required for consistency, of rules to
which they already adhered as arising out of an existing way of life. In short, the argument from relativity has some force simply because the actual variations in the moral codes are more readily explained by the hypothesis that they reflect ways of life than by the hypothesis that they express perceptions, most of them seriously inadequate and badly distorted, of objective values.

But there is a well-known counter to this argument from relativity, namely to say that the items for which objective validity is in the first place to be claimed are not specific moral rules or codes but very general basic principles which are recognized at least implicitly to some extent in all society—such principles as provide the foundations of what Sidgwick has called different methods of ethics: the principle of universalizability, perhaps, or the rule that one ought to conform to the specific rules of any way of life in which one takes part, from which one profits, and on which one relies, or some utilitarian principle of doing what tends, or seems likely, to promote the general happiness. It is easy to show that such general principles, married with differing concrete circumstances, different existing social patterns or different preferences, will beget different specific moral rules; and there is some plausibility in the claim that the specific rules thus generated will vary from community to community or from group to group in close agreement with the actual variations in accepted codes.

The argument from relativity can be only partly countered in this way. To take this line the moral objectivist has to say that it is only in these principles that the objective moral character attaches immediately to its descriptively specified ground or subject: other moral judgements are objectively valid or true, but only derivatively and contingently—if things had been otherwise, quite different sorts of actions would have been right. And despite the prominence in recent philosophical ethics of universalization, utilitarian principles, and the like, these are very far from constituting the whole of what is actually affirmed as basic in ordinary moral thought. Much of this is concerned rather with what Hare calls “ideals” or, less kindly, “fanaticism.” That is, people judge that some things are good or right, and others are bad or wrong, not because—or at any rate not only because—they exemplify some general principle for which widespread implicit acceptance could be claimed, but because something about those things arouses certain responses immediately in them, though they would arouse radically and irresolvably different responses in others. “Moral sense” or “intuition” is an initially more plausible description of what supplies many of our basic moral judgements than “reason.” With regard to all these starting points of moral thinking the argument from relativity remains in full force.

The Argument from Queerness

Even more important, however, and certainly more generally applicable, is the argument from queerness. This has two parts, one metaphysical, the other epistemological. If there were objective values, then they would be entities or qualities or relations of a very strange sort, utterly different from anything else in the universe. Correspondingly, if we were aware of them, it would have to be by some special faculty of moral perception or intuition, utterly different from our ordinary ways of knowing everything else. These points were recognized by Moore when he spoke of non-natural qualities, and by the intuitionists in their talk about a “faculty of moral intuition.” Intuitionism has long been out of favour, and it is indeed easy to point out its implausibilities. What is not so
alien stressed, but is more important, is that the central thesis of intuitionism is one to which any objectivist view of values is in the end committed: intuitionism merely makes unpalatably plain what other forms of objectivism wrap up. Of course the suggestion that moral judgements are made or moral problems solved by just sitting down and having an ethical intuition is a travesty of actual moral thinking. But, however complex the real process, it will require (if it is to yield authoritatively prescriptive conclusions) some input of this distinctive soil, either premisses or forms of argument or both. When we ask the awkward question, how we can be aware of this authoritative prescriptivity, of the truth of these distinctively ethical premisses or of the cogency of this distinctively ethical pattern of reasoning, none of our ordinary accounts of sensory perception or introspection or the framing and confirming of explanatory hypotheses or inference or logical construction or conceptual analysis, or any combination of these, will provide a satisfactory answer; “a special son of intuition” is a lame answer, but it is the one to which the clearheaded objectivist is compelled to resort.

Indeed, the best move for the moral objectivist is not to evade this issue, but to look for companions in guilt. For example, Richard Price argues that it is not moral knowledge alone that such an empiricism as those of Locke and Hume is unable to account for, but also our knowledge and even our ideas of essence, number, identity, diversity, solidity, inertia, substance, the necessary existence and infinite extension of time and space, necessity and possibility in general, power, and causation. If the understanding, which Price defines as the faculty within us that discerns truth, is also a source of new simple ideas of so many other sorts, may it not also be a power of immediately perceiving right and wrong, which yet are real characters of actions?

This is an important counter to the argument from queerness. The only adequate reply to it would be to show how, on empiricist foundations, we can construct an account of the ideas and beliefs and knowledge that we have of all these matters. I cannot even begin to do that here, though I have undertaken some parts of the task elsewhere. I can only state my belief that satisfactory accounts of most of these can be given in empirical terms. If some supposed metaphysical necessities or essences resist such treatment, then they too should be included, along with objective values, among the targets of the argument from queerness. […]

Plato’s Forms give a dramatic picture of what objective values would have to be. The form of the Good is such that knowledge of it provides the knower with both a direction and an overriding motive; something’s being good both tells the person who knows this to pursue it and makes him pursue it. An objective good would be sought by anyone who was acquainted with it, not because of any contingent fact that this person, or every person, is so constituted that he desires this end, but just because the end has to-be-pursuedness somehow built into it. Similarly, if there were objective principles of right and wrong, any wrong (possible) course of action would have not-to-be-doneness somehow built into it. […]

The need for an argument of this sort can be brought out by reflection on Hume’s argument that “reason”—in which at this stage he includes all sorts of knowing as well as reasoning—can never be an “influencing motive of the will.” Someone might object that Hume has argued unfairly from the lack of influencing power (not contingent upon desires) in ordinary objects of knowledge and ordinary reasoning, and might maintain that values differ from natural objects precisely in their power, when known, automatically to influence the will. To this Hume could, and would need to, reply that this
objection involves the postulating of value-entities or value-features of quite a different order from anything else with which we are acquainted, and of a corresponding faculty with which to detect them. That is, he would have to supplement his explicit argument with what I have called the argument from queerness.

Another way of bringing out this queerness is to ask, about anything that is supposed to have some objective moral quality, how this is linked with its natural features. What is the connection between the natural fact that an action is a piece of deliberate cruelty—say, causing pain just for fun—and the moral fact that it is wrong? It cannot be an entailment, a logical or semantic necessity. Yet it is not merely that the two features occur together. The wrongness must somehow be “consequential” or “supervenient”; it is wrong because it is a piece of deliberate cruelty. But just what in the world is signified by this “because”?” And how do we know the relation that it signifies, if this is something more than such actions being socially condemned, and condemned by us too, perhaps through our having absorbed attitudes from our social environment? It is not even sufficient to postulate a faculty which “sees” the wrongness: something must be postulated which can see at once the natural features that constitute the cruelty, and the wrongness, and the mysterious consequential link between the two.
